MIE Trak - EBOM Import

Unlimited EBOMs

MIE Trak handles EBOMs of any size and can quickly be imported into the quoting and estimating module.

Self Learning

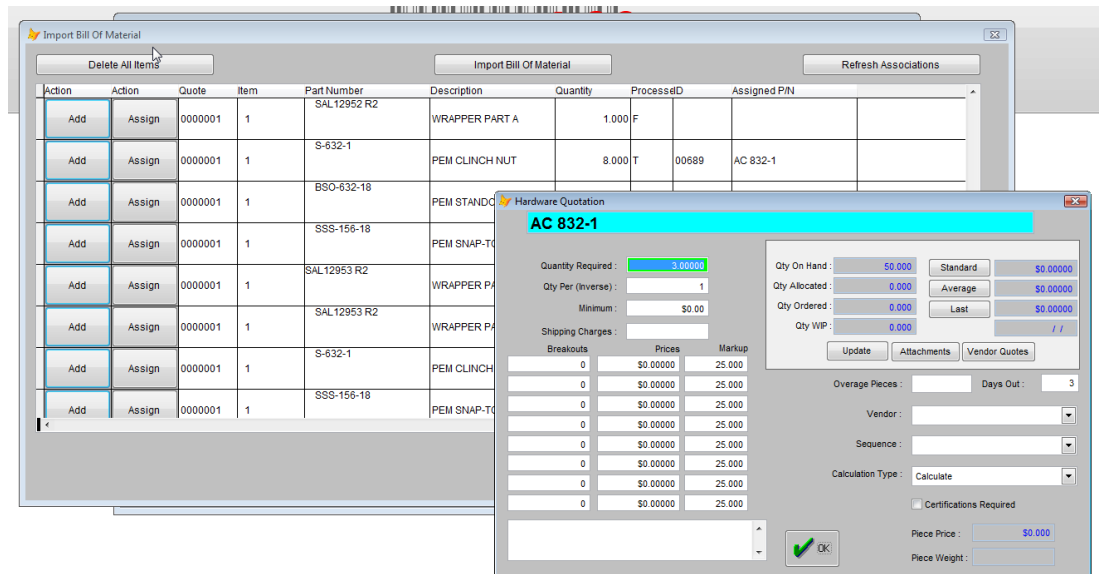

Importing EBOMs into MIE Trak is easy as the system self learns to connect proper bill of material items to your standard inventory items.

Import Multiple Times

MIE Trak allows you to import multiple EBOMs into a single quote and will allow updating of the EBOM which translates into an updated quote.

EBOMs Into Work Orders

Create routers from EBOMs is very easy and fast saving many hours of time consuming repetitive tasks.

An engineering bill of materials (EBOM) is a type of bill of materials (BOM) reflecting the product as designed by engineering. Many engineering models provide detailed EBOM specifications including part number, description and the required quantity of each component.

MIE Trak now can take a standard EBOM exported from any cad or modeling package directly into the quoting and estimating module. If you have modifications in your EBOM, reimport and MIE Trak takes care of all the associations automatically.

Save hours of time with the new MIE Trak EBOM Import module.
