

How To: Upgrade MIE Trak

This installation guide is for upgrading MIE Trak 10.x to a newer released version. If you are running version 10.x you can upgrade directly to the latest version without installing the prior versions.

Download MIE Trak

1. Go to <http://www.mie-solutions.com> and download the latest MIE Trak version and patches. You must have logged in as a user and you can click on the **MIE Trak** link under the products tab
2. Click on the **Download MIE Trak** link
3. Click on the appropriate version which you want to download. If there are any patches or release notes you can download those files also.

Kick All Users Out

You must have everyone log out of MIE Trak without exceptions. You must exist SCANVIEW and SCANVIS or you will get errors during the installation process.

Backup Existing System

MIE Trak will be installed over your existing system so you should do a full backup of your system. Make sure everyone is out of MIE Trak before doing you backup.

Install MIE Trak

Install the MIE Trak software by running the setup.exe program within the zip file of the MIE Trak installation which was downloaded. The password will be given to you via email or enter a case and we can give you the password.

Install MIE Trak Patches If Applicable

When you downloaded the latest version of MIE Trak to install, if there were associated patches unzip all the files in the patch and place in the root MIE Trak directory and overwrite the existing files.

Upgrade Databases

MIE Trak updates databases, indexes and file between version so it is necessary to run some house cleaning activities outlined below. It is advisable doing these steps on the file server for performance reasons unless you do not have much data.

1. Log into MIE Trak as supervisor
2. Under the dictionary pull down menu do the following
 - a. Update Data Structures All
 - b. Pack All
 - c. Reindex All
 - d. Update System Files

Congratulations You Are Finished
